

PROJECT CASE STUDY:

Matador A450, Albuquerque, NM

RF Transparent Concealment (RFTC)

“Creative designs that **look better** than the original structure.”

All cell site concealment systems need to be “RF Friendly” but they also need to look really nice or you’ll have to deal with zoning and landlords. Our experienced team makes great looking products that are sure to please even the pickiest customer.

The old cupola on this church was octagonal and we needed to make one square to accommodate the antennas. We designed and built this one piece unit with a removable access door and it was dropped in place and secured in one afternoon. It looks better than the old one and matches the architectural design perfectly.

If you are faced with the challenge to build a structural thing of beauty give us a call and we’ll make it happen.

Old cupola in lower corner and new RF Friendly cupola in place on roof

- **Cellular Carrier approved**
- **RF tested and WiMax ready**
- **Full-service design and engineering**
- **Custom-made molded panels and FRP structural shapes**
- **Fiberscreen™ (fiberglass) & Polyscreen™ (foam) products**
- **Made to install easy and look fantastic!**

Call us today to be a part of your next site-walk, bid, project and success!
